

Psychometrics

Psychometrics, Measurement and Quality in Assessment Special Interest Group of ASME

Promoting Excellence
in Clinical Education
and Training

Who are the Psychometrics Special Interest Group (SIG)?

Measuring the quality of the assessment we undertake in medical education is a vital part of improving undergraduate and postgraduate training. The Psychometrics and Measurement Special Interest Group (SIG) is a group within ASME which aims to create a network to support those directly involved in psychometrics & assessment quality. It spans academics, clinicians, assessment coordinators and psychometricians. We have a membership of 80+ across undergraduate and postgraduate medical education, from a broad range of subject areas (medicine, dentistry, law, vets etc) and disciplines.

We run an active 'discussion group' via JISCMail as well as three popular group meetings each year exploring topical and challenging issues in assessment, measurement and psychometrics. The SIG is supported by the ASME Board of Directors, and also aims to support ASME's aims and wider membership in a better understanding and application of meaningful assessment, and effective quality improvement of assessment.

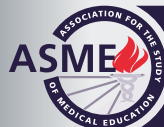

For more information
on the Psychometrics
SIG please visit

Aims:

- Promoting excellence in the application of assessment theory and practice in medical education.
- Advancing understanding and application of psychometric techniques in assessment.
- A programme of dissemination and collaborative research across institutions, disciplines and programmes.
- A network to promote Continuing Professional Development for those closely involved in assessment psychometrics, and share best practice.
